PROFESSIONAL SUMMARY

Highly analytical Project Delivery Engineer and Full Stack Software Engineer with 4+ years of professional experience architecting, developing, and deploying scalable enterprise web applications. Proven core competency in Backend Engineering using Python, Django, and Django REST Framework (DRF) alongside robust Frontend Development using Angular and React.js. Demonstrated success managing the end-to-end Software Development Lifecycle (SDLC), translating business requirements into technical specifications, and driving cross-functional development sprints. Expert in database optimization using PostgreSQL, Cloud management via AWS Cloud Services, and implementing highly secure software solutions to ensure business continuity and platform stability.

TECHNICAL SKILLS

Languages	: Python, TypeScript, JavaScript, SQL
Backend	: Django, Django REST Framework (DRF), Celery Task Queues, RESTful API Design
Frontend	: Angular, HTML5, CSS3, Bootstrap, Figma UI Prototyping
Data Management	: PostgreSQL, Redis In-Memory Caching, MySQL
DevOps & Cloud	: AWS Cloud Services (EC2), Environment Configuration, Git, GitHub, CI/CD Pipelines (GitLab)
Practices	: Agile/Scrum, Sprint Planning, Code Reviews, RBAC Security Protocols, Production Support
AI Tools	: ChatGPT, Claude Code, Gemini, GitHub Copilot, Cursor, Perplexity AI

PROFESSIONAL EXPERIENCE

Travidux Technologies Pvt. Ltd. – Project Delivery Engineer (PDE)

May 2025 – Present

- Spearheaded the deployment of 4 complex enterprise systems, supervising end-to-end product life cycles from initial resource scope to final cloud execution.
- Collaborated directly with corporate clients to analyze target technical requirements, translating operational problem statements into structured backend designs.
- Oversaw software delivery lifecycles by structuring feature timelines, managing sprint workload allocation, and tracking milestones using Agile metrics.
- Enforced high-quality code metrics by leading weekly quality audits, verifying software build stability and cross-layer data encryption rules.
- Provided clear technical leadership to a cross-functional squad of developers, removing infrastructure roadblocks and optimizing weekly velocity parameters.

Travidux Technologies Pvt. Ltd. – Software Developer

Sep 2022 – May 2025

- Architected full-stack enterprise portals scaled for 50+ discrete operational branches, optimizing process automated routines to trim system latency metrics by 30%.
- Engineered, validated, and documented 25 internal RESTful web services using Python, securely processing 1,000+ monthly financial network payloads.
- Optimized relational PostgreSQL data models using optimized index strategies and managed an independent memory layer via Redis to boost query speeds by 40%.
- Provisioned web servers on AWS cloud infrastructure, defining scalable environment parameters and reducing runtime post-launch configuration friction by 15%.

- Built 3 standalone evaluation sandboxes utilizing Flask frameworks, coordinating feedback loops with a target group of 50 active beta testers.
- Constructed modular web components to wrap application logic, decreasing redundant functional segments by 25%.

KEY PROJECTS

Distributed ERP Infrastructure Design

Python, Django Framework, DRF, PostgreSQL, Redis Memory Caching, Angular, GitLab

- Conceptualized multi-tier access rule protocols and engineered back-office transactional API endpoints.
- Streamlined inventory and analytical ledger tracking for corporate data pipelines, minimizing operational data round-trip lags while maintaining auditable user access paths.

Customer Relationship Management (CRM)

Python, Django, REST APIs, PostgreSQL Database, Angular Architecture, Bootstrap Layouts

- Designed CRM BI software for data retrieval, analysis, and business intelligence reporting. Engineered logic
- Enhanced decision-making through effective data visualization and reporting tools.
- Enhanced productivity, reducing response time to client inquiries by 25%.

Booking Portal

Python, Django, REST APIs, PostgreSQL Database, Angular Architecture, Bootstrap Layouts

- A web-based platform for booking vessels, managing schedules, ticket generation, and integrating payment gateways.
- A management system for monitoring vessel bookings, handling offline reservations, and generating reports.

EDUCATION

Bachelor of Computer Applications (BCA)

2018 – 2021

University of Calicut (College of Applied Science, Nadapuram)

Computer Science - Higher Secondary

2016 – 2018

GHSS Vadakara
